Ort: Raum 5052, Ahornstr. 55

Referent: Dr. Dino Distefano,
Queen Mary University of London

Titel: An automatic local heap analysis based on Separation logic

Abstract:

We introduce a program analysis for linked list programs where the abstract domain uses formulae from Separation Logic. Moreover, we describe a very recent extension of this technique. The result is a new program termination analysis designed to handle imperative programs whose termination depends on the mutation of the program's heap.
