

EINLADUNG

Zeit: Donnerstag, 23. Nov. 2006, **16.00 Uhr**

Ort: AH I, Ahornstr. 55

Referent: Herr Prof. Dr. Bart Jacobs,
Radboud University Nijmegen, The Netherlands

Titel: A security review of the biometric passport

Abstract:

Many countries are currently introducing a biometric passport with a chip that contains at this stage a facial scan of the passport holder, and at a later stage also fingerprints. The regulations and technology involved will be discussed and reviewed in this talk, including the relevant protocols for authentication and secure transmission. The passport will be presented as part of the wider setting of identity management.

Short biography: Jacobs holds professorships in computer security at the universities of Nijmegen and Eindhoven in the Netherlands. He has published on software correctness and security, smart cards, electronic voting and passports. He regularly contributes to societal debates on the use and impact of ICT.
